Draft results of the baseline mapping study of the energy use situation in the buildings sector in Jordan

Buildings energy issues, policy and institutional frameworks in Jordan

Taskforce Meeting, 27 November 2019 – Amman, Jordan
Topics covered in this presentation:

1- **Background and Energy related information:**
   1.1: Overview of the building sector
   1.2: Energy related challenges in the building sector for Jordan.
   1.3: Energy pricing tariffs applied to end-users in the building sector.

2- **Institutional frameworks and policies related information:**
   2.1: Identification of the main actors and stakeholders in the residential and tertiary Sector
   2.2: Policies, strategies and regulations in force in Jordan aiming to establish sustainable energy systems in the building sector.
   2.3: Policies, strategies and regulations under development in Jordan aiming to establish sustainable energy systems in the building sector.
   2.4: Assessment of the country's know-how and capabilities with respect to sustainable energy systems in the building sector

3- **Existing instruments and programs:**
   3.1: Existing instruments/potential tools for implementing sustainable energy programs in the building sector
   3.2: Potential local financing tools for sustainable energy actions

4- **Challenges:**
   Challenges and obstacles that may hinder the development of sustainable energy in the building sector in Jordan
1- Background and Energy Related Information

1.1: Overview of the building Sector:

- Population and Demographic dynamics>> increase expenditure of housing>> construction activities. (1), (2)
- Construction Sector= GDP, Employment, economy, contracts & implementation challenges (3)
- residential stock in Jordan is heating, which consumes ~61 percent of the residential stock’s total energy and ~14 percent of total annual demand on national energy for heating spaces. (4)
- Building description, morphology and skyline>> both residential and non-Residential.
- Building Licenses, Existing Stock, (1), (2)
- Governorates of Jordan and Climate zones>> population density per governorate >> surveys conducted according to governorate and districts NOT Climate Zone= difficult to find detailed data according to location as part of climate zone. (2)
- No. of existing building stock, and their categorization are collected per year and sector, for governorates and districts.

1- Background and Energy Related Information

1.2: Energy related challenges in the building sector for Jordan:

- Non-renewable energy limitations \(^{(1)}\):
  - National Imported Energy = 92% 2018

- National Renewable energy potential:
  - Renewable energy resources \(^{(2)}\) = 930 GWh 2016
    - Hydropower = 42 GWh = 4.50 %
    - Biomass = 6.5 GWh = 0.65 %
    - PV = 491 GWh = 52.80 %
    - Wind = 391 GWh = 42.00 %
  - National Renewable Energy Contribution = 0% in 2015 >> 6% in 2017. \(^{(3)}\)
  - Total Net-Metering Systems = 6566 units 2017. \(^{(4)}\)

\(^{(1)}\): Innovative Jordan, 2019, \(^{(2)}\): IEA, 2016, \(^{(3)}\): USAID & Jordan Investment Commission, 2017, \(^{(4)}\): EMRC, 2017
1- Background and Energy Related Information

1.2: Energy related challenges in the building sector for Jordan:

- National Primary energy and electricity demand (1)
  - Primary= oil (56.6 %), + natural gas (35.0 %), + solar energy (5.0%)
  - National Energy Consumption= transportation sector (49%), + residential sector (23%), + industrial (14%) + commercial (14 %).

- Building Envelope requirements (1)
  - Final Energy= Residential= 21.5% 2018
    Commercial= 15.5% 2018
  - Electricity= Residential= 46.0% 2018
    Commercial= 14.0% 2018
  - Thermal insulation studies (2), Cooling and heating needs (3), Heating Systems in residential sector (4)

1- Background and Energy Related Information

1.3: Energy pricing tariffs applied to end-users in the building sector:

a): Countryside “rural fils” (1)

b): Distribution Tariff: (2)
- Principal Consumers
- TV and Broadcasting
- Household Tariff
- Domestic Tariff
- Private Hospital
- Commercial Sector
- Banking Sector
- Telecommunication Sector
- Industrial Sector
- Agriculture
- Water Pumping
- Hotels
- Streets Lighting
- Others

c): Tariff sale of Renewable Energy: (3)

d): Fuel Price-difference Item (2)

e): Fuel Prices for 2010, 2014 and 2017 (4)

2- Institutional frameworks & policies related information:

2.1: Identification of the main actors and stakeholders in the residential and tertiary Sector:

a): **Public Sector Actors**: (1)

- Ministry of Energy and Mineral Resources (MEMR)
- Energy and Mineral Regulation Commission (EMRC):
- Ministry of Public Works and Housing (MPWH)
- Ministry of Environment
- Jordan National Building Council (JNBC)
- The Department of Statistics (DoS)
- Jordan Standards and Metrology Organization (JSMO)
- The National Energy Research Center (NERC)

b): **Private Sector Actors**: (2)

- Jordan Engineers Association (JEA), AND Jordanian Contractors Association (JCA)
- Jordan Green Building Council (JGBC)
- Electricity Distribution System Operators (EDSO)
- The Regional Center for Renewable Energy and Energy Efficiency (RCREEE)
- Royal Scientific Society (RSS)/ Construction & Sustainable Building Center (CSBC)
- Greater Amman Municipality, (GAM)/ Sustainable Unit
- Others.

(1): MEMR, EMRC, MPWH, JNBC, DOS, JSMO, NERC, (2): JEA, JCA, JGBC, EDSO, RCREEE, RSS, CSBC, GAM
2- Institutional frameworks & policies related information:

2.1: Identification of the main actors and stakeholders in the residential and tertiary Sector:

<table>
<thead>
<tr>
<th>Stakeholders</th>
<th>Regulations</th>
<th>Administration</th>
<th>Enforcement</th>
<th>Outreach</th>
<th>Technical</th>
</tr>
</thead>
<tbody>
<tr>

</table>

(1): MEMR, EMRC, MPWH, JNBC, JSMO, (2): JEA, JCA, JGBC, RSS, CSBC, GAM

27/11/2019
Presentation One, Tala Awadallah, ESCWA, 2019
2- Institutional frameworks & policies related information:

2.2: Policies, strategies and regulations in force in Jordan aiming to establish sustainable energy systems in the building Sector:

a): National Energy Strategy (1), (2)
b): National Strategy for the Development of Renewable Resources (3), (4)
c): National Master Strategy of Energy Sector (1)
e): National Energy Efficiency strategy (1), (5),
f): Jordanian National Building Law No. 7, Instructions of Code application, (6),
j): Bylaw No. (73) Year 2012 on Regulating Procedures and Means of Conserving Energy and Improving Its Efficiency, (1),
j): General Electricity Law, (8),

2- Institutional frameworks & policies related information:

2.2: Policies, strategies and regulations in force in Jordan aiming to establish sustainable energy systems in the building Sector:

k): Jordanian Building Codes & Guides \(^{(1)}\), \(^{(2)}\), Annex D

- Thermal Insulation Code 2009
- Mechanical Ventilation & AC Code 2018
- Central Heating Code 2018
- Natural Ventilation Code 2018
- Natural Lighting Code 2018
- Solar Energy Code 2012

- Jordan Green Building Guide 2013
- Thermal Insulation Code Manual 2018
- Central Heating Code Manual 2018
- Mechanical Ventilation & AC Code Manual 2018

\(^{(1)}\): MPWH, 2018  \(^{(2)}\): RSS, CSBC, 2018
2- Institutional frameworks & policies related information:

2.3: Policies, strategies and regulations *under development* in Jordan aiming to establish sustainable energy systems in the building sector:

a): Sustainable Energy Mix and Policy Framework for Jordan (1)

b): Codes application and implementation (2) >> Sustainable Unit

c): Forecasts and future assumptions (3)

2.4: Assessment of the country's know-how and capabilities with respect to sustainable energy systems in the building sector

a): Jordanian Engineers Association (JEA) + Engineers Training Center (4)

b): Professional certification>> PA-CEMP>> JEA, REEEII, JREEEF, MEMR, RCREEE

c): Upgrading Capacity of Local designers & Consultants>> A/E Business Council+ Green Unit

d): Pilot Projects>> JGBC (5) + (6)

e): Capacity building programs

- The Master on Sustainable Development and Renewable Energy (7)
- Affordable Green Housing Program (8)

3- Existing instruments and programs

3.1: Existing instruments/ potential tools for implementing sustainable energy programs in the building sector:

a): Governmental Green building Incentives: (1), (2)
   - GAM>> FAR
   - Incentives are only given to a whole green building system, not only the energy efficiency compliance

b): Projects through the MEMR: (3)
   - Install renewable energy schemes in 20 schools
   - Buildings implemented by the Higher Council for Science & Technology HCST to adopt EE.
   - Solar Thermal Systems and PV applications in Al Basheer and three government hospitals
   - Convert the Islamic Hospital into a green building using renewable energy schemes to generate electricity from solar PV system and energy wheeling regulations
   - Finance 12 national institutions with JD2 million to install solar power systems to support their humanitarian, social and medical services to citizens
   - Others.

## 3- Existing instruments and programs

### 3.1: Existing instruments/ potential tools for implementing sustainable energy programs in the building sector:

c)) The Second National Energy Efficiency Action Plan: (1), (2), Residential

Table 16: Summary of EE measures in residential sector 2017-2020, NEEAP 2014.

<table>
<thead>
<tr>
<th>No</th>
<th>Measures</th>
<th>Description</th>

3- Existing instruments and programs

3.1: Existing instruments/ potential tools for implementing sustainable energy programs in the building sector:

a): The Affordable Green Housing (GAH) Program (1), (2)
b): The Energy Efficiency in Public Buildings (EEPB) Project (3),
c): The Accelerating 0-emission building sector ambitions in the MENA region Project (4)
d): Projects through collaboration with Regional and International agencies:
   USAID+ REEE I + REEE II + RCREEE + MINARET+ CES-MED + WBG

3.2: Potential local financing tools for sustainable energy actions:

a): General:
   □ Concessionary lending from development banks (5)
   □ Donor aid grants. (5)
   □ MEMR>> Expression of Interest (unsolicited proposals) framework+ international collaborations. (6)

b): Tax Exemption for EE and RE systems (7), Annex B

### 3- Existing instruments and programs

#### 3.2: Potential local financing tools for sustainable energy actions:

**c): Jordan Renewable Energy and Energy Efficiency Fund (JREEEF):**

<td>15,000 PV systems; 50,000 SWH; 150,000 LED tubes and 51,000 LED bulbs</td>
<td>Cumulative SME RE/EE investment of 10 million JD</td>
<td>Cumulative SME RE/EE investment of 5 million JD</td>
<td>Cumulative SME RE/EE investment of 5 million JD</td>
<td>Cumulative SME RE/EE investment of 3 million JD</td>
</tr>
</tbody>
</table>
4- Challenges

**Challenges and obstacles that may hinder the development of sustainable energy in the building sector in Jordan**

- Lack of awareness in regulations, laws, application requirements for EE.
- Electricity/transport infrastructure deficiencies.
- Inadequate legislation and enforcement that enables green growth, lack of proper inspection mechanisms.
- Short termism in planning
- Overlap of ministry’s responsibilities & lack of coordination between ministries towards common goals
- Perceived and actual strain placed by refugees on economy
- Lack of capacity, technical skills & data required to design & implement green growth projects
- Lack of adequate financing mechanisms to incentivize the private sector to initiate green growth.
- Lack of funding perceived as key barrier by ministries
- Low public trust in governmental commitment to strategies
- Lack of knowledge transfer and communication between the public and private sector
- Lack of smart systems: recording and reporting of data (by sector)= electronic government.

Conclusions and Remarks:

- Develop client knowledge and product information services through credible professional sources like the Ministries of Public Works and Housing, Energy and Environment, Jordan Green Building Council and Jordan Engineering Association.
- Provide proper incentive and funding schemes and build a system of incentives for contractors to ensure the cost-effectiveness of green buildings.
- Strengthening of governmental incentives through subsidy, rebate program, tax incentive schemes, rating systems and technical assistance.
- Develop proper EE benchmarks for Jordan.
- Activate Monitoring Reporting Systems (MRV) with the MEMR.
