Chapter II presents the main consolidated national accounts for each ESCWA member country. All the tables presented are based on data provided by the national statistical offices of corresponding countries up to November 2014. In cases where no national data were available, particularly for the last year in a series, various statistical methods were used to calculate estimates of the main aggregates. For countries that did not provide 2013 estimates, implicit deflators were estimated through regression of historical time-series against Consumer Price Index (CPI) estimates and were employed, along real growth forecasts, to obtain estimates of GDP aggregates, in both constant and current terms.

Figures are presented at the end of each set of country tables to outline the economic structure of the country in question, with GDP classified according to economic activity and expenditure.

General observations on the national data presented in this chapter are set forth below.

**Jordan**

The National Accounts Division in the Department of Statistics prepared the national accounts tables in accordance with the United Nations System of National Accounts (SNA) 1968.

**The United Arab Emirates**
